Smartphones Enable Smart Cities

featuring

Dr. Petros Spachos

FRIDAY, NOVEMBER 10, 2017 | Science Bldg. Rm. N1044 | 2:30-3:30 pm

The expanding capabilities and growing number of smartphone devices are producing a new computing infrastructure integrating smart phones, users and sensors. Users expect their phones to locate their social network friends; turn on the lights in the living room; report the temperature in their car; provide instant access to video and music and communicate with all the other wireless enable devices.

DR. PETROS SPACHOS
School of Engineering,
University of Guelph
Director, GryPHone Lab.
*The GryPHone Lab is
designed to enable mobile
systems research that cannot
be done in any other way.*
